1GB = 1 billion bytes; actual formatted capacity less. iMac uses 667MHz DDR2 SDRAM (PC2-5300). Combo drive plays CDs and DVDs, and burns CDs. SuperDrive plays and burns both CDs and DVDs. Memory available to Mac OS X may vary depending on graphics needs. Minimum graphics memory usage is 80MB, resulting in 432MB of system memory available.

Mac mini at a glance.

2x graphics. 2x fun.

With up to two times faster graphics than ever before, Mac mini brings high performance to everything from playing 3D games to checking email.

Way more than meets the eye.

A 1.4-inch-thin, aluminum unibody enclosure hides a powerful, full-size computer. And a removable bottom panel gives you easy access to memory.

Mac mini comes to the big screen.

It's easy to connect Mac mini to the biggest screen in the house — your HDTV — courtesy of a built-in HDMI port. Plug in one HDMI cable and start enjoying content on your Mac mini in brilliant HD. Like movies and TV shows from iTunes, the Internet, and your photo library. There's also a handy control that lets you easily adjust the output on Mac mini to fill even the biggest HDTV screen. And when you just want to listen to music, you can play your entire iTunes collection through your homeentertainment center, or stream it to a set of speakers in any room via an AirPort Express Base Station.

Personal space.

Now you can get a 320GB or 500GB hard drive and pack in your photo libraries, movies, music, files, and more, more, more. You can also play and burn all the DVDs and CDs you want with the fast, slot-loading SuperDrive

DIY memory.

Thanks to a removable bottom panel, now it's easy to open Mac mini and add memory. Just a slight twist of the panel, and you're inside Mac mini. Simply pop your memory into the SO-DIMM slot, then twist the panel back on. And you're done.

Apple Accessories...

Apple Magic Mouse

The same Multi-Touch technology first introduced on the revolutionary iPhone comes to the mouse. It's called Magic Mouse, and it's the world's first Multi-Touch mouse. Click anywhere, scroll in any direction, and swipe through images on its smooth, seamless top shell. It works wirelessly using Bluetooth, so you don't have to worry about cables or adapters cluttering your workspace. And built-in software lets you configure Magic Mouse any way you want.

only 2,390 B.

Apple Wireless Keyboard

Ultrathin and completely cable-free, the compact Apple Wireless Keyboard uses Bluetooth technology to connect with your Mac. The ultracompact design takes up less desktop space and allows you to mouse more comfortably next to the keyboard.

only 2,390 B.

Magic Trackpad

The new Magic Trackpad is the first Multi-Touch trackpad designed to work with your Mac desktop computer. It uses the same Multi-Touch technology you love on the MacBook Pro. And it supports a full set of gestures, giving you a whole new way to control and interact with what's on your screen. Swiping through pages online feels just like flipping through pages in a book or magazine. And inertial scrolling makes moving up and down a page more natural than ever. Magic Trackpad connects to your Mac via Bluetooth wireless technology. Use it in place of a mouse or in conjunction with one.

only 2,390 B.

AirPort Extreme Base Station

The sleek, easy-to-use AirPort Extreme Base Station with simultaneous dual-band support is the perfect wireless access point for home, school or small business. It offers fast, 802.11n Wi-Fi access for Mac computers, PCs and Wi-Fi devices such as iPhone, iPod touch and Apple TV.

Only 6,290 B.

Mini DisplayPort to VGA Adapter

The Mini DisplayPort to VGA Adapter lets you connect a standard analog monitor, projector, or LCD that uses a VGA connector or cable to a Mac with a Mini DisplayPort.

Only 1,000 B.

Mini DisplayPort to DVI Adapter

The Mini DisplayPort to DVI Adapter lets you connect an advanced digital monitor, such as the 20- or 23-inch Apple Cinema Display, to a Mac with a Mini DisplayPort.

Only 1,000 B.

Memory

More memory (RAM) increases overall performance and enables your computer to run more applications at the same time. The MacBook supports up to 2GB of RAM.

- 1GB 667 DDR2 SDRAM [1,000 B.]
- 2GB 667 DDR2 SDRAM [2,990 B.]
